Announcement from the Centers for Medicare & Medicaid Services (CMS):

The Data Results view for electronic clinical quality measures (eCQM) has been updated in the Hospital Quality Reporting (HQR) System.

The cards have been removed from the **Accuracy** and **Outcomes** tabs, dropdown options have been added, and you now have the ability to filter your results.

A tutorial video is now available on the HQR Playlist to provide step by step instructions on How to view eCQM Data Results.

In addition, Succession Management has been implemented for eCQM test submissions. Succession Management gives you the ability to resubmit a file if the updated file contains the same five key identifiers. This update will help in showing the same results between test and production submissions.

As the HQR System continues to improve, any changes will be communicated.
